

BioBase®

HEMPFLAX BIOBASE is excellent 100% natural stable bedding. It is completely composed of the wood core of sustainably cultivated fibre hemp and totally free of chemical additives.

HEMPFLAX BIOBASE is the same bedding as Hemplax but then enhanced with airway-friendly eucalyptus oil. An extremely healthy, sustainable and comfortable alternative for stables.

Features

Dust-free

Hemp bedding is virtually dust-free, unlike many other beddings. This is great for both animals and their caretakers, especially when it comes to respiratory issues or allergies.

Absorption

Fibre hemp has a much higher natural absorption capacity than conventional cage and floor bedding, enabling a significantly better absorption of moisture and unpleasant odours.

User friendly

BioBase outlasts other beddings because dirty and saturated parts can easily be scooped up, making it less labour-intensive and more cost-efficient.

Hooves

Hemp fibre is pleasant on the hooves. The bedding is relatively heavy and creates a springy stable bed. The structure of the fibre also prevents clotting in the hooves. The natural antibacterial effect of hemp fibres also ensures that hoof rot and other hoof issues are made a thing of the past.

Information

Product information	Hemp bedding made from the wood core of industrial fibre hemp. Has a 500 to 650% absorption capacity
Product code	7000200
Packaging unit	Bales of 140 liters, PE plastic
Number of bales per euro-pallet	33 bales
Product dimensions	40 x 80 x 20 cm

Usage & Maintenance

Stable bedding:

base layer of a half bale BioBase per square meter of stable

Maintenance:

on average, 1 bale per week for a stable

Consult the manual for more detailed information.

BioBase

Fibre Hemp...

- doesn't require chemicals during cultivation;
- uses very little water per kilo of fibres for further processing;
- has strong insulating and moisture regulating properties;
- contains no protein content and therefore won't attract pests like insects or rodents;
- stores CO₂ during growth, delivering a positive effect on the CO₂-balance;
- contributes to and represents the circular economy philosophy.

SOLUTIONS FROM NATURE

Industrial hemp fibre is an annually renewable, natural source of non-toxic, high-quality raw materials. Hemp-based animal care products are natural, healthy and extremely comfortable. Perfect for a healthy and pleasant animal living environment with minimal environmental impact.

FACTS

- 1 hectare of agricultural land provides 9 tonnes of hemp straw per year (4x more biomass than a hectare of forest per year!)
- 1 hectare of hemp fibre stores 15 tonnes of CO₂ each harvest.
- Cultivation doesn't require pesticides and enriches the soil.

BENEFITS

HEMPFLAX animal care products are professionally and sustainably produced without any chemical additives. Virtually dust-free, therefore much less chance of allergic reactions and respiratory problems! And the natural antibacterial properties of the hemp plant prevent diseases and infections.

FOOTPRINT

HEMPFLAX truly cares for the environment. We believe in this plant and cultivate our own crops. In doing so, we are extremely resource economical. We aim to keep our carbon footprint as small as possible. Simply because we think it's important.

HEMPFLAX produces, on an industrial scale, raw materials, semi-finished and finished products based on environmentally conscious cultivated fibre hemp and flax. By cultivating its own crops, HEMPFLAX ensures a continuous supply of high-quality products. HEMPFLAX is ISO 9001 certified.
